

ABDULLAH ABOUELEILA

Freelance Full-Stack Software Developer & AI Automation Specialist

abouella.dev@gmail.com | [Portfolio](#) | [LinkedIn](#)

Available for remote, hybrid, or on-site opportunities

PROFESSIONAL SUMMARY

Freelance full-stack software developer building complete operational systems, from database design and business logic to user workflows, reporting, permissions, and AI automation workflows. Experienced in translating business requirements into structured data models, user workflows, role-based permissions, application screens, reports, documents, and integration logic. Built an enterprise-level bilingual HR & Payroll web product covering 60+ pages across 6 core modules including Employees, Contracts, Attendance, Leave, Payroll, and Self-Service backed by robust compliance, analytics, reporting, and admin setup capabilities.

TECHNICAL SKILLS

Full-Stack Web: React, TypeScript, JavaScript, Vite, Tailwind CSS

Databases & Data Modeling: PostgreSQL, Supabase, SQL Server, Oracle SQL, PL/SQL, schema design, relational data modeling

Backend, Security & Business Logic: Supabase RPC, Edge Functions, RLS, RBAC, workflow rules, validation logic, API/integration workflows

Reporting & Documents: PDF exports, Excel exports, Arabic/English reports, payslips, contracts, labels, operational templates

AI & Workflow Automation: Make.com, n8n, Voiceflow, Vapi, AI voice agents, chatbots, CRM workflows, outreach automation

Desktop & Legacy Systems: C#, .NET Framework, WinForms, DevExpress, Visual Studio

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Software Developer & AI Automation Specialist

Project-Based / Remote / Freelance | 2021 - Present

- Build business applications, reporting systems, database tools, and AI automation workflows for HR/payroll, pharmacy operations, sales outreach, customer support, and internal process automation.
- Design database schemas, relational models, business rules, permissions structures, and workflow logic for real business operations.
- Develop bilingual Arabic/English business systems including operational screens, reports, documents, and self-service workflows.
- Create automation flows connecting AI tools, CRM systems, lead data, email outreach, voice calls, and follow-up logic.
- Translate manual business processes into structured systems designed to reduce paperwork, duplicate entry, approval delays, reporting effort, and fragmented operations.

SELECTED PROJECTS

Enterprise HR & Payroll Platform

Full-Stack Web Product | React, TypeScript, Supabase/PostgreSQL, Tailwind CSS

Built a bilingual Arabic/English HR & Payroll platform designed for enterprise-level workforce operations, covering 60+ pages across 6 core modules including Employees, Contracts, Attendance, Leave, Payroll, and Self-Service backed by robust compliance, analytics, reporting, and admin setup capabilities.

- Designed the full database structure, module relationships, workflow logic, permissions model, and application architecture.
- Built employee lifecycle workflows covering records, onboarding, contracts, attendance, shifts, leave, payroll, loans, advances, EOSB, approvals, and compliance processes.
- Developed role-based access flows for administrators, HR users, managers, and employee self-service users.
- Created bilingual Arabic/English screens, reports, documents, payslips, and operational outputs.
- Designed the platform to reduce manual HR paperwork, duplicate entry, payroll preparation effort, approval delays, and fragmented reporting.

SELECTED PROJECTS (CONTINUED)

Pharmacy Label & Reporting System

Oracle Forms/Reports & Oracle SQL

- Designed and delivered a pharmacy labeling and reporting system to support KSA pharmacy labeling requirements and operational documentation workflows.
- Built medicine label-generation workflows covering patient instructions, dosage details, seller information, and medicine-related documentation.
- Developed Oracle-based forms, reports, and SQL logic to standardize label preparation and support internal record keeping.

AI AUTOMATION SYSTEMS

AI Voice Outreach Caller

Vapi, Make.com, n8n, CRM Workflows

- Built an AI voice outreach system designed for outbound calling, lead qualification, follow-up handling, and CRM logging.
- Designed voice-agent conversation flows for lead engagement and connected call outcomes to automated follow-up actions.
- Created a reusable architecture that can be adapted for outreach, appointment setting, and customer engagement use cases.

Automated B2B & B2C Outreach Systems

Make.com, AI Personalization, CRM Automation

- Built outreach workflows for lead data processing, enrichment, AI-personalized messaging, follow-up sequencing, and CRM outcome tracking.
- Designed B2B outreach capacity for 2,000+ personalized emails per day, depending on sender warm-up, deliverability setup, mailbox limits, and Make.com operation capacity.
- Built B2C customer engagement flows for personalized messaging, segmentation, response-based actions, and organized follow-up tracking.

AI Customer Support & Reception Agents

Voiceflow, Vapi, Make.com, n8n

- Built AI assistant and AI voice receptionist systems for customer questions, booking flows, order-related conversations, FAQs, and service matching.
- Developed reusable AI agent flows for gym booking, pet retail support, restaurant reception, and service-based customer support scenarios.
- Connected AI conversations with automation tools for logging, follow-up, and CRM-style workflow handling; portfolio demos available on request.

ADDITIONAL TECHNICAL BACKGROUND

Previous development work includes desktop business systems using C#, .NET Framework, WinForms, DevExpress, and SQL Server, with experience in attendance, payroll, bilingual reporting, inventory visibility, receipt printing, and operational data management.

EDUCATION

Bachelor of Science in Information Technology
Saudi Electronic University - May 2021
